

DR. DESIGN PVT. LTD.

Designing Digital Experiences

ABOUT DR. DESIGN

DR. DESIGN PVT. LTD. is a forward-thinking technology and consulting company specializing in *Geospatial Solutions, IT Services, and Digital Transformation*. Founded on a strong foundation of technical expertise and government-backed credibility, we are expanding our services to Startups, SMEs, and growing businesses—leverage cutting-edge tech to build smarter, scale faster, and succeed in the digital age.

With a highly skilled workforce, deep domain expertise, and a client-centric approach, we bring together data, design, and digital tools to solve complex real-world problems.

OUR EXPERTISE

Geospatial & Surveying

We offer advanced mapping, drone surveys, and GIS database development using ArcGIS, QGIS, and remote sensing for accurate infrastructure and land data analysis.

1

IT & Web/App Development

We build custom web apps, e-commerce platforms, CRMs, and mobile apps using modern tech stacks like React, Laravel, Flutter, and Spring Boot.

2

Digital Marketing & Branding

We deliver ROI-focused SEO, ads, social media marketing, and branding solutions including logo design, content creation, and email automation.

3

WHAT WE DO BEST

KEY SERVICES

IT Consulting, Cybersecurity & Automation

Secure, streamline, and scale your systems with expert IT strategy and automation. IT Project & Digital Infrastructure Management Team

Web, Mobile & ERP Development

Custom websites, mobile apps, and ERP platforms built for modern businesses. Web & Cloud Platform Management Team.

Data, AI & Analytics Solutions

Leverage intelligent automation, data science, and AI for real-time insights.

Digital Marketing & Brand Growth

Boost visibility and engagement with SEO, paid ads, content, and design.

Geospatial Services & Technical Consulting

Accurate GIS mapping, surveying, and domain consulting with training support.

WHO WE WORK WITH

Government & Public Sector

We deliver GIS, infrastructure, and digital solutions for national initiatives.

Clients: Survey of India, NHPC, NHP, NMCG, G2G Projects

Startups & SMEs

Supporting early-stage founders and growing businesses with scalable tech and branding.

Work Includes: MVPs, CRMs, portals, digital rebranding, Security Audit

Sector-Specific Enterprises

Custom tech for EdTech, Travel, Real Estate, and field service operations.

Solutions: LMS platforms, booking tools, property sites

E-Commerce & D2C Brands

We build seamless web and mobile storefronts optimized for growth and user experience.

Projects: Product apps, order systems, payment gateway integrations

OUR NOTABLE PROJECTS

DR. DESIGN PVT. LTD.

PROJECTS

SURVEY OF INDIA CORS PORTAL

PROJECT OVERVIEW : The project focused on managing, maintaining, and expanding India's CORS network while providing user support, improving performance, and promoting its nationwide use and accessibility.

DURATION : September 2024 – CURRENT

Tech Stack Used: PHP, MySQL, Bootstrap, JavaScript.

Tech Stack Current: , MERN Stack (for migration), FortiGate Firewall, NAS Servers, Load Balancing, and FTP configuration, REDS, MEM JS.

OUR ROLE

We developed the full platform architecture, designed user flows, optimized databases, and ensured secure access to real-time geospatial data.

Our team also managed data servers, system health, and integrated firewalls for data safety and reliability.

OUTCOME ACHIEVED

The portal onboarded 10,000+ users in the first year, improved data access reliability to 99.9%, and reduced downtime by 30%. Optimized APIs and user interface enhancements also boosted engagement by 35% and cut maintenance costs significantly. Achieved Single Page Application. Attached Email and OTP verification.

NATIONAL HYDROLOGY PROJECT (NHP)

PROJECT OVERVIEW : The project focused on developing India's own vertical datum system and spatial reference framework. It involved field data collection for orthometric height (MSL), designing a web portal, and building digital infrastructure for nationwide hydrological accuracy.

DURATION : 18 February 2021 – 25 May 2025
(executed in multiple phases)

TECHNOLOGY USED : Python, Django

OUR ROLE

We supported the design of the National Spatial Reference Frame, conducted extensive field data collection, and developed a web portal using Python and Django to centralize and visualize hydrology-related data.

OUTCOME ACHIEVED

Delivered a modern digital system for terrain and elevation mapping. Strengthened India's hydrological planning capabilities with precise elevation data and user-friendly access to spatial information.

TERRAIN & LAND MAPPING FOR POWER PROJECT – NHPC

PROJECT OVERVIEW : The project involved generating high-resolution Digital Terrain and Surface Models using LiDAR technology. It aimed to integrate terrain and hydrographic data to support planning for a 3800 MW power generation project by NHPC.

DURATION : 4 November 2024 – 5 April 2025

OUR ROLE

We delivered LiDAR-based mapping, developed accurate terrain models, and defined land use and land cover. The data was integrated with hydrographic layers to aid engineering, planning, and environmental assessment.

OUTCOME ACHIEVED

Provided NHPC with precise geospatial datasets essential for project planning, environmental clearance, and infrastructure development. Enhanced data accuracy ensured better decision-making and streamlined project execution.

NMCG GIS DIGITISATION PROJECT

PROJECT OVERVIEW : The project aimed to digitally map rural and urban areas along the Ganga River, including roads, railways, drainage systems, and public utilities to support the Clean Ganga mission.

DURATION : August 2022 – July 2023

DR. DESIGN PVT. LTD.

OUR ROLE

We deployed 87 skilled professionals including GIS operators, supervisors, and a database admin. Our team handled feature extraction, digitisation, quality checks, and secure geodatabase delivery.

OUTCOME ACHIEVED

Successfully completed the project under GeM contract worth ₹3.41 Cr. Delivered high-accuracy data on time, received formal certification, and ensured full client satisfaction.

SWAMITVA PROJECT

PROJECT OVERVIEW : A national initiative to map rural residential areas and provide villagers with verified property records. The goal was to empower land ownership through accurate digital maps for legal and economic recognition.

DURATION : 28 DEC 2020– MAR 2023

DR. DESIGN PVT. LTD.

OUR ROLE

We deployed 130 trained professionals to generate high-resolution village maps across 8 states. Created a geodatabase with property, transport data, and 5 feature classes to support nationwide land documentation.

OUTCOME ACHIEVED

Enabled lakhs of rural households to receive property documentation. Supported legal recognition, improved governance, and built digital datasets for state and national GIS infrastructure.

TIDE GAUGE MONITORING – MARINE GEODESY

PROJECT OVERVIEW : The project focused on monitoring sea level changes using tide gauges at various coastal locations. Data was collected to support coastal planning, navigation safety, climate studies, and disaster preparedness through real-time sea level tracking.

DURATION : September 2022 – May 2024

OUR ROLE

We deployed and managed tide gauge systems, ensured real-time data collection, and maintained the accuracy of sea level records. Our team also supported system calibration and integrated monitoring with coastal management frameworks.

OUTCOME ACHIEVED

Delivered accurate, real-time sea level data used for flood prediction, coastal planning, and early warning systems. Enhanced the reliability of marine observations critical to national climate and navigation initiatives.

CAPITAL WORKS MANAGEMENT ERP FOR SURVEY OF INDIA

PROJECT OVERVIEW : A fully customised ERP solution developed to streamline the proposal management process across all offices of Survey of India. The platform supports financial tracking, administrative workflows, sanction issuance, and real-time project status updates.

DURATION : JANUARY 2025 – CURRENT

TECHNOLOGY USED : Python, Django

OUR ROLE

Developed a comprehensive ERP system to streamline and manage Capital Works proposals and expenditures for the Survey of India. The system supports multi-level workflow, where proposals originate at GDC, move to Zonal Offices, and finally to Survey of India HQ for approvals.

OUTCOME ACHIEVED

Enabled seamless proposal processing and real-time visibility into financial sanctions. Improved administrative efficiency, enhanced data transparency, and empowered decision-makers with dynamic reports and interactive dashboards across all SOI zones.

भारतीय सर्वेक्षण विभाग SURVEY OF INDIA

DATA GENERATION & MANAGEMENT SERVICES

PROJECT OVERVIEW : The project focuses on supporting IdeaForge with end-to-end data services, including high-quality data generation, structured processing, and efficient management to power drone-based applications and geospatial insights.

DURATION : 2024 – Present

OUR ROLE

We are responsible for generating accurate datasets, processing large volumes of spatial data, and managing digital outputs to ensure timely delivery and operational readiness for their drone-based systems.

OUTCOME ACHIEVED

Ensured seamless data delivery with high accuracy and consistency. Contributed to improved data-driven decision-making for drone operations and enhanced client confidence through reliable data support.
